Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>
int findFloor(int arr[], int low, int high, int x) {
    if (low > high)
        return -1;
    int mid = (low + high) / 2;
    if (arr[mid] == x)
        return arr[mid];
    if (arr[mid] < x) {
        int result = findFloor(arr, mid + 1, high, x);
        if (result == -1)
            return arr[mid];
        return result;
    }
    return findFloor(arr, low, mid - 1, x);
}
int main() {
    int n, x;
    scanf("%d", &n);
    int arr[n];
    for (int i = 0; i < n; i++)
        scanf("%d", &arr[i]);
    scanf("%d", &x);
    int floor = findFloor(arr, 0, n - 1, x);
    printf("%d", floor);
    return 0;
}
